PROFESSIONAL SUMMARY

Software engineer and Computer Science & Engineering undergraduate at SUST with 3+ years of experience in full-stack development and AI evaluation. Currently a Forward Deployed Engineer integrating AI features into client products; previously led a development team and contributed to RLHF code evaluation. Works with Python, JavaScript, Django, FastAPI, Node.js, React, and PostgreSQL. Targeting software engineering, RL environment, AI coding benchmark, and coding-agent evaluation roles.

PROFESSIONAL EXPERIENCE

nogori.ai — Forward Deployed Engineer

February 2026 – Present

- Implemented 2 integrated AI-powered features into client-focused products, translating business requirements into practical technical solutions.
- Implemented 5+ API endpoints and service integrations to improve interoperability between application components and external systems.
- Debugged and optimized 10+ technical issues across AI workflows and backend services, improving application reliability and reducing integration failures.

BlackWaves Studio — Software Engineer

2023 – 2025 | Remote

- Led an 8-member development team that delivered 20+ production web projects for clients, including two multinational companies.
- Optimized client websites, generating 25% more ROI than before.
- Built web and mobile applications for clients, owning projects from scoping through deployment.
- Contributed to building the technical infrastructure of Shahjalal Foods, a multinational company.
- Translated business requirements into full-stack deliverables through direct client communication.

Outlier — RLHF Contributor, Code Evaluation

Feb 2024 – Feb 2026 | Remote, Contract

- Evaluated and refined 280+ AI-generated coding solutions, assessing correctness, robustness, and adherence to task requirements.
- Developed 160+ adversarial prompts and edge-case scenarios to uncover reasoning flaws, implementation bugs, and vulnerabilities in AI-generated code.
- Created verified reference implementations (golden solutions) and structured evaluation rubrics to ensure consistent quality assessment.
- Reproduced coding failures, traced underlying logic errors, and validated proposed fixes through systematic debugging.
- Annotated, segmented, and validated image and video datasets against rubric-defined quality standards.

PROJECTS

Stitch AI — Agentic Retail & Virtual Try-On

Nov 2025 – Apr 2026 | Winner, DU VisionX AI Hackathon

- Architected an agentic AI retail intelligence platform with a virtual try-on plugin, integrating Kling AI and fashion try-on APIs for real-time 3D garment visualization and confidence scoring (fit, style, context).
- Built occasion-aware semantic search over a vectorized product catalog, plus a personalized fashion memory system and digital wardrobe twin.
- Delivered retailer-side purchase heatmaps, inventory analytics, and A/B testing insights to reduce return rates through data-driven shopping.

YumAI — Restaurant SaaS Platform

Jan 2025 – Jun 2025 | React, Next.js, Django, FastAPI, PostgreSQL

- Designed and built the backend, database, and REST APIs for restaurant POS, orders, billing, and inventory used in daily operations.
- Implemented end-to-end order flows and stock alerts, and integrated an LLM-based demand forecasting feature.

Automama — Autonomous Vehicle Perception System

Jan 2024 – Present | Python, OpenCV, ROS2, VPI, CuPy

- Developed a real-time stereo-camera perception pipeline for obstacle detection and environment mapping in an autonomous vehicle.
- Optimized computation for a compact embedded GPU platform, reducing hardware cost and power requirements.

EDUCATION

B.Eng. in Computer Science and Engineering

Shahjalal University of Science and Technology (SUST) | 2023 – Present

ACHIEVEMENTS

- Champion, VisionX 2025 (DU AI Hackathon)
- Gold Medalist, National Robotics Olympiad 2020
- Bronze Medalist, International Robotics Olympiad 2020

SKILLS & TOOLS

Software Development | Backend Development | API Development | Frontend Development | Data Labeling | Python | JavaScript | TypeScript | Django | FastAPI | Node.js | Express.js | React | Next.js | PostgreSQL | MySQL | Docker | GitHub Actions | Git | Machine Learning | RLHF | Code Evaluation | OpenCV | ROS2 | scikit-learn | Flutter | Spring Boot | C++ | Java

HOBBIES & INTERESTS

Football, Travelling, Fishing
